EXPERIENCE

BlackRock, Atlanta, GA

Data Scientist | Data Engineer

2023–present

- o Architected and maintain the compliance pipeline — a packaged extract → normalize → score → load library executing policy SQL across Snowflake, producing per-dataset compliance status for downstream certification workflows.
- o Built the certification component of Certification-as-a-Service (CaaS), a Streamlit platform orchestrating 5 independent compliance agents and generating PDF certificates — cutting a multi-day manual process to minutes.
- o Developed governance agent skills under the firm's internal skill framework — built an ingestion pipeline over the Confluence API grounding engineering copilots in 89 internal wiki pages for policy-accurate answers.
- o Built a token-usage evaluation harness — prompt-caching A/B test on SEC 10-K extraction with per-call JSONL trace capture — supporting an ongoing agent-evaluation collaboration with the firm's AI research group.
- o Designed the taxonomy target-state architecture — diagnosed two divergent sources of truth and proposed the enterprise data catalog as sole system of record with the downstream sheet as a generated view; approved and now in build.
- o Lead the firmwide data taxonomy approval forum — run taxonomy change management across data governance, engineering, and product stakeholders.
- o Co-developed Velocity at a firm hackathon — a tokenized data-distribution framework (Flask REST backend) where the token balance is the access control and the blockchain's native ledger doubles as an automatic audit trail. Patent pending.
- o Built a NAV analysis script automating day-over-day comparisons and anomaly detection across all clients, with auto-generated summary notes — saving 100+ manual review hours monthly.
- o Built the summary-note quality analysis behind the Scorecard initiative, surfacing an issue affecting 10% of clients; started solo, adopted by a global team of 10+.

University of Georgia, Athens, GA

Research Analyst

2022–2023

- o Built an NLP pipeline over 85K+ scraped news articles, quantifying moral framing with word-embedding dictionaries.
- o Modeled feature associations with multilevel models, factor analysis, and Blinder-Oaxaca decomposition.

EDUCATION

University of Georgia, Athens, GA

2022–2023

MS in Business Analytics

SELECTED PUBLICATIONS

- o Public Relations Review (2024); Housing & Society (under review, 2026). Full list on [Google Scholar](#).

TECHNICAL SKILLS

- o Programming & Tools: Python, SQL, Snowflake, Git, Flask, Streamlit, Power BI, Power Automate.
- o Machine Learning & AI: LLMs, agentic workflows, retrieval-augmented generation, embedding models & fine-tuning, vector search, prompt engineering; NLP — transformers, sentiment analysis, tokenization, text classification.
- o Data Engineering & Analytics: ETL pipelines, REST API integration, Python packaging, feature engineering, data wrangling, web scraping; predictive modeling, supervised & unsupervised learning.

ADDITIONAL INFORMATION

- o Certificates: Udacity Data Scientist, Generative AI, and Programming for Data Science with Python Nanodegrees.
- o Languages: English, Chinese (Mandarin).
